### **DETAILED ACTION**

#### Election/Restrictions

1. Applicant's election with traverse of Group I (claims 1-20) in Paper No. 5 is acknowledged. The traversal is on the ground(s) that the restriction requirement is not proper because the action does not indicate how the apparatus can be used to practice another and materially different process. This is not found persuasive because the apparatus does in fact can be used to practice another process for example, it can be use with a method for detect temperature of a body vessel other than the blood vessel.

The requirement is still deemed proper and is therefore made FINAL.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States

3. Claims 1-11 and 20 are rejected under 35 U.S.C. 102(b) as being anticipated by Strul (5,498,261). Strul discloses a thermal angioplasty system including an elongated catheter, a balloon, a thermally responsive indicator as claimed (figure 1-2, col. 4, lines 25 to 56)

The introductory statement of intended use and all other functional statements have been carefully considered but are deemed not to impose any structural limitations on the claims distinguishable over Strul's thermal angioplasty system which is capable of being used as claimed if one desires to do so.

Application/Control Number: 10/020,345

Art Unit: 3731

## Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 12-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Solar (5,413,557) in view of Strul (5,498,261). In regard to claims 13-19, Solar disclose angioplasty catheter (figure 10) including all the limitation of the claims except for a presence of a thermally responsive indicator as claimed. Strul discloses a thermal angioplasty balloon including a thermally responsive indicator as claimed wherein the heat applied by the thermal angioplasty balloon promote the healing of blood vessels damaged by balloon angioplasty. Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to employ a thermal system and a thermally responsive indicator into Solar's angioplasty catheter in order to promote the healing the blood vessels damaged by balloon angioplasty or by the cutting instrument of the angioplasty catheter.
- 6. In regard to claim 12, although, the combination teaching of Solar in view of Strul does not disclose a fiber optic camera, it is well known in the art to provide a fiber optic camera for an angioplasty catheter in order to view a working area of the angioplasty catheter. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to include a fiber optic camera in order to view a

Art Unit: 3731

working area/space of the angioplasty catheter. Doing so would meet all the limitations

as claimed.

7. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to (Jackie) Tan-Uyen T. Ho whose telephone number is

(703) 306-3421. The examiner can normally be reached on MULTIFLEX Mon. to Sat..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Michael J. Milano can be reached on (703) 308-2496. The fax phone

number for the organization where this application or proceeding is assigned is 703-

872-9306.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
